DEPARTMENT OF HEALTH AND HUMAN SERVICES

Indian Health Service

Notice of Service Delivery Area Designation for the Mashpee Wampanoag Indian Tribe

AGENCY: Indian Health Service, HHS.

ACTION: Notice.

SUMMARY: This Notice advises the public that the Indian Health Service (IHS) established the geographic boundaries of the Service Delivery Area (SDA) for the newly recognized Mashpee Wampanoag Indian Tribe. The SDA was established on December 22, 2008 and services were provided to eligible beneficiaries beginning on January 19, 2009. The Mashpee SDA is comprised of Barnstable, Bristol, Norfolk, Plymouth and Suffolk counties in the State of Massachusetts. The counties listed are designated administratively as the SDA, to function as a Contract Health Service Delivery Area (CHSDA), for the purposes of operating a Contract Health Service (CHS) program pursuant to the Indian Self-Determination and Education Assistant Act (ISDEAA), Public Law 93-638.

DATES: This notice is effective 30 days after date of publication in the **Federal Register** (FR).

ADDRESSES: Comments may be mailed to Betty Gould, Regulations Officer, Indian Health Service, 801 Thompson Avenue, Suite 450, Rockville, Maryland 20852. Comments will be made available for public inspection at this address from 8:30 a.m. to 5 p.m. Monday-Friday beginning approximately two weeks after publication of this notice.

FOR FURTHER INFORMATION CONTACT: Carl Harper, Director, Office of Resource Access and Partnerships, Indian Health Service, 801 Thompson Avenue, Suite

360, Rockville, Maryland 20852. Telephone 301/443-2694 (This is not a toll free number).

SUPPLEMENTARY INFORMATION: The IHS currently provides services under regulations in effect on September 15, 1987 and IHS republished at 42 CFR part 136, Subparts A-C. Many of the newly recognized Tribes do not have reservations and either Congress has legislatively designated counties to serve as SDAs or the Director, IHS, exercised reasonable administrative discretion to designate SDAs to effectuate the intent of Congress for these Tribes. The Director, IHS, published notice of the establishment of SDAs in the June 21, 2007 FR Notice (72 FR 34262-01). The SDAs function as CHSDAs for the purposes of operating a CHS program pursuant to the ISDEAA, Public Law 93-638. Thus, the CHSDA list incorporates the SDAs that operate as CHSDAs for newly recognized Tribes. At 42 CFR part 136 subpart C, a CHSDA is defined as the geographic area within which CHS will be made available by the IHS to members of an identified Indian community who reside in the area. Residence within a CHSDA by a person who is within the scope of the Indian health program, as set forth in 42 CFR 136.12 creates no legal entitlement to contract health services but only potential eligibility for services. Services needed but not available at an IHS/Tribal facility are provided under the CHS program depending on the availability of funds, the person's relative medical priority, and the actual availability and accessibility of alternate resources in accordance with the regulations.

As applicable to the Tribes, these regulations provide that, unless otherwise designated, a CHSDA shall consist of a county which includes all or part of a reservation and any county or counties which have a common boundary with the reservation (42 CFR 136.22(a)(6) (2007). In the **Federal Register** on February 22, 2007 (72 FR 8007), the Mashpee Wampanoag Indian Tribe was officially recognized as an Indian Tribe within the meaning of

Federal law. After consultation with the Tribal governing body, the SDA for the Tribe was agreed upon. The purpose of this FR notice is to notify the public of the Mashpee Wampanoag Indian Tribe SDA to incorporate Barnstable, Bristol, Norfolk, Plymouth and Suffolk counties in the State of Massachusetts. The SDA was established on December 22, 2008 and services were provided to eligible beneficiaries beginning on January 19, 2009.

Under 42 CFR 136.23 those otherwise eligible Indians who do not reside on a reservation but reside within a CHSDA must be either members of the Tribe or maintain close economic and social ties with the Tribe. In this case, the Tribe estimated the eligible user population to be 1,422 enrolled Mashpee Wampanoag members who are actively involved with the Tribe.

The Mashpee Wampanoag Indian Tribe is located in the town of Mashpee, Barnstable County, Massachusetts, on the southeastern portion of Cape Cod along Nantucket Sound. A significant number of the Mashpee Wampanoag SDA eligible user population also reside in the counties of Bristol, Norfolk, Plymouth and Suffolk counties in the state of Massachusetts. These five counties are adjacent to each other. Barnstable, Bristol, Norfolk, Plymouth and Suffolk counties are not part of any other Tribe's CHSDA or SDA. It is important for the Mashpee Wampanoag Indian Tribe to be able to deliver health care services to enrolled members residing in these five counties. The Tribe believes eligible Tribal members living in the counties of the proposed SDA should also be eligible for CHS. The financial resources required to meet the immediate needs of the Tribal members residing in the five counties were determined by the IHS and were placed in the Nashville Area CHS budget. Since

This notice does not contain reporting or recordkeeping requirements subject to prior approval by the Office of Management and Budget under the Paperwork Reduction Act of 1980.

Image Analysis Software for Quantitative Evaluation of Striation Patterns and Their Defects in Skeletal Muscles

Description of Technology: Available for licensing is software written in MatLab for evaluating striation patterns in images of skeletal muscle fibers for better sensitivity in the quantitation of skeletal muscle disorders. Skeletal muscles have a regular, periodic organization (the periodicity of the sarcomeres), which is not only structural but also functional. Muscle pathologies create disorder in the normally periodic myofibrils. Objective grading of muscle morphology is necessary to assess muscle health, compare biopsies, and evaluate treatments and the evolution of disease.

Potential Commercial Applications: Drug development for muscular disorders.

Competitive Advantages: Automated analysis of sarcomere dysplasia for objective grading of muscle morphology.

Development Stage: Prototype.

Capillary Viscometer for Measuring Viscosity of Macromolecular Solutions of Biological Relevance

Description of Technology: A capillary-based device and system for measuring the rheological properties of solutions of synthetic and biological polymers. The device automatically serially dilutes and varies the flow rate of a sample, permitting measurement of solution viscosity across wide ranges of concentration and shear rate without changing samples. The device can rapidly and accurately assay solute stability, solute-solvent and solute-solute interactions in solutions of proteins and other macromolecules of biotechnological and pharmaceutical interest, as well as solution injectability.

Potential Commercial Applications: Rapid characterization of composition-dependent rheological properties of candidate biopharmaceuticals and industrial polymers.

Competitive Advantages:

- Automatic variation of solute concentration
- Automatic variation of shear rate

- Direct measurement of solution injectability

Development Stage:

- Prototype
- *In vitro* data available

Use of Erythropoietin and Derivatives for Treatment of Hypertension

Description of Technology: Erythropoietin (EPO), a natural hormone produced by kidneys is associated with stimulation of red blood cell production. Recombinant human erythropoietin (rhEPO) is currently used for treatment of anemia and has powerful cardioprotective properties. Hypertension remains a major health problem and a serious risk factor for stroke and chronic heart failure. Researchers at the NIH have discovered that administering a therapeutically effective dose of rhEPO or an EPO derivative including carbamylated erythropoietin (CEPO) and Helix B surface peptide (HBSP), have an acutely reducing both systolic and diastolic blood pressure, via Nitric Oxide (NO) signaling. Long-term administration of derivative of EPO, HBSP, prevents elevation of arterial blood pressure in an animal model of hypertension. Unlike long-term treatment with rhEPO, administration of EPO derivatives, such as HBSP, does not stimulate excessive red cell production and will be useful in the development of anti-hypertensive drugs.

Potential Commercial Applications: Therapeutics for treatment of hypertension.

Competitive Advantages:

- Administration of EPO and derivatives does not stimulate excessive red blood cell production
- This technology utilizes activation of natural vasodilation mechanisms
