SUPPLEMENTARY INFORMATION:

Title: Generic Clearance of the Science Resources Statistics Survey Improvement Projects.

OMB Approval Number: 3145-0174.

Expiration Date of Approval: May 31, 2013.

Abstract. Established within the National Science Foundation by the America COMPETES Reauthorization Act of 2010 § 505, codified in the National Science Foundation Act of 1950, as amended, the National Center for Science and Engineering Statistics (NCSES) serves as a central Federal clearinghouse for the collection, interpretation, analysis, and dissemination of objective data on science, engineering, technology, and research and development for use by practitioners, researchers, policymakers, and the public. NCSES conducts about a dozen nationally-representative surveys to obtain the data for these purposes. The Generic Clearance will be used to ensure that the highest quality data are obtained from these surveys. State of the art methodology will be used to develop, evaluate, and test questionnaires and survey concepts as well as to improve survey methodology. This may include field or pilot tests of questions for future large scale surveys, as needed.

Expected Respondents. The respondents will be from industry, academia, nonprofit organizations, members of the public, and State, local, and Federal governments. Respondents will be either individuals or institutions, depending upon the survey under investigation. Qualitative procedures will generally be conducted in person or over the phone, but quantitative procedures may be conducted using mail, Web, email, or

phone modes, depending on the topic under investigation. Up to 11,060 respondents will be contacted across all survey improvement projects. No respondent will be contacted more than twice in one year under this generic clearance. Every effort will be made to use technology to limit the burden on respondents from small entities.

Both qualitative and quantitative methods will be used to improve NCSES's current data collection instruments and processes and to reduce respondent burden, as well as to develop new surveys. Qualitative methods include, but are not limited to, expert review; exploratory, cognitive, and usability interviews; focus groups; and respondent debriefings. Cognitive and usability interviews may include the use of scenarios, paraphrasing, card sorts, vignette classifications, and rating tasks. Quantitative methods include, but are not limited to, telephone surveys, behavior coding, split panel tests, and field tests.

Use of the Information. The purpose of these studies is to use the latest and most appropriate methodology to improve NCSES surveys and evaluate new data collection efforts. Methodological findings may be presented externally in technical papers at conferences, published in the proceedings of conferences, or in journals. Improved NCSES surveys will help policy makers in decisions on research and development funding, graduate education, and the scientific and technical workforce, as well as contributing to reduced survey costs.

Burden on the Public. NCSES estimates that a total reporting and recordkeeping burden of 14,280 hours will result from activities to improve its surveys. The calculation is shown in Table 1.

TABLE 1—POTENTIAL SURVEYS FOR IMPROVEMENT PROJECTS, WITH THE NUMBER OF RESPONDENTS AND BURDEN HOURS
