FOR FURTHER INFORMATION CONTACT:

Colette Cairns or Amy Hapeman, (301) 427-8401.

SUPPLEMENTARY INFORMATION: The subject modification to Permit No. 15661, issued on January 24, 2012 (77 FR 13097) is requested under the authority of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*) and the regulations governing the taking, importing, and exporting of endangered and threatened species (50 CFR 222-226).

Permit No. 15661 authorizes the permit holder to characterize population structure, size class composition, foraging ecology, and migration patterns for green (*Chelonia mydas*) and hawksbill (*Eretmochelys imbricata*) sea turtles in the Northern Mariana Islands (NMI). Authorized research consists of counts and hand captures of sea turtles during vessel surveys. Captured sea turtles may be measured, weighed, flipper and passive integrated transponder tagged, temporarily marked, tissue sampled, photographed and released. A subset of the turtles may be satellite tagged before release and then tracked from the vessel. Sea turtle carcasses, tissues or parts may be opportunistically salvaged each year.

The permit holder now requests authorization to collect blood and scute samples from up to 20 green and 20 hawksbill sea turtles per year, a subset of those currently authorized for capture. This sampling would allow for analysis of a broad suite of environmental pollutants that may be threatening the health of sea turtles in the NMI. All other research objectives, capture methods, take numbers, action areas, and activities would remain unchanged. The modification would be

valid until the permit expires on January 31, 2017.

Dated: June 19, 2013.

Office of Protected Resources, National
Marine Fisheries Service.*
