j. *Description of Project Facilities:* The project consists of a powerhouse containing one generator unit rated at 400 kilowatts with a hydraulic capacity of 440 cubic feet per second, a Denil-style fishway, and appurtenant facilities. The dam used by the project, which is immediately adjacent to the powerhouse, is a 14-foot-high, 250-foot-long stone masonry structure owned by the Town of Frankfort.

k. *Description of Proceeding:* The project's exemption from licensing was granted September 20, 1982 (20 FERC ¶ 62,498). Article 2 of the exemption requires the exemptee to comply with any terms and conditions set by federal and state resource agencies for the protection of fish and wildlife resources. The exemptee has failed to comply with terms and conditions set by the U.S. Fish and Wildlife Service (FWS) and the state of Maine for designing, constructing, and operating fish passage facilities at the project.

The exemptee completed installation of facilities for upstream and downstream passage of fish, including Atlantic salmon, pursuant to Article 2 in 1986; however, deficiencies in the design and construction of the facilities, and ongoing lack of maintenance, have prevented the successful operation of the facilities pursuant to Article 2. In 2009, Atlantic salmon using project waters were federally listed as endangered under the Endangered Species Act and in May 2012, Commission staff and staff from the FWS and National Marine Fisheries Service began to work intensively with the exemptee to correct ongoing problems with the fish passage facilities. To date, the exemptee has failed to make any significant progress in correcting the problems, despite notice from Commission staff that such failure constitutes violation of Article 2 and threatens endangered Atlantic salmon.
