

Under Appendix B of the *NIH Guidelines*, most coronaviruses are classified as RG2 viruses. Given the severity of illness seen to date, MERS-CoV will be added to the list of RG3 agents, as was done for SARS-CoV. However, because little is currently known about the source, reservoir, and epidemiology of this virus, the RG classification will be reassessed if new data emerge relevant to the biosafety risks associated with the agent. In addition, while research with RG3 agents is often carried out at Biosafety level 3 containment—with appropriate enhancements depending upon the nature of the agent, e.g., increased respiratory precautions for agents that are transmissible by the aerosol route—the RG of an agent is not the only factor that determines the containment level. As stated in Section II–A of the *NIH Guidelines* (Risk Assessment) “once the risk group of an agent is identified, this should be followed by a thorough consideration of how the agent is to be manipulated” and there may be experiments for which a higher containment level is warranted. Interim Laboratory Biosafety Guidelines for Handling and Processing Specimens Associated with MERS-CoV are available on the CDC Web site at the following URL: <http://www.cdc.gov/coronavirus/mers/guidelines-lab-biosafety.html>.

Pseudomonas aeruginosa

Bacteria belonging to the genus *Pseudomonas* are ubiquitous in the environment. They are generally considered to be opportunistic pathogens, i.e., able to cause disease in individuals who are immunocompromised. According to the CDC, serious pseudomonas infections usually occur in hospitalized patients and those who are immunocompromised and these infections can lead to severe illness and death (<http://www.cdc.gov/hai/organisms/pseudomonas.html>). Healthy people can also become ill from *Pseudomonas aeruginosa*, especially after exposure to inadequately disinfected water. Per the CDC, “Ear infections, especially in children, and more generalized skin rashes may occur after exposure to inadequately chlorinated hot tubs or swimming pools. Eye infections have occasionally been reported in persons using extended-wear contact lenses” (<http://www.cdc.gov/hai/organisms/pseudomonas.html>).

Because this bacterium generally causes mild disease in healthy individuals and there are antibiotics to treat such disease, the OBA will add it

to Appendix B as an RG2 bacterium. This is consistent with other assessments of the RG for this pathogen by other biosafety guidances, including the Canadian (<http://www.phac-aspc.gc.ca/lab-bio/res/psds-ftss/pseudomonas-spp-eng.php>) and the European Community (<http://www.bacterio.net/hazard.html#group2>) guidances.

Appendix B–II–A. Risk Group 2 (RG2)—Bacterial Agents Including Chlamydia.

The following addition will be made to *Appendix B–II–A. Risk Group 2 (RG2)—Bacterial Agents Including Chlamydia*:

Pseudomonas aeruginosa

The following addition will be made to *Appendix B–III–D Risk Group 3 (RG3)—Viruses and Prions*:

Middle East Respiratory Syndrome coronavirus (MERS-CoV)
