This ICR reflects the on-going burden and costs for existing facilities, including submitting semiannual reports. Note the standard does not impose regular reporting requirements for all subject area source sectors.

Abstract: This information collection supports the consultation process by which the U.S. Environmental Protection Agency (EPA) will select a revised logo and messaging for its Design for the Environment (DfE) program. A key goal of the Agency's DfE program is to work with businesses to voluntarily incorporate safer chemicals and other health and environmental considerations into the design of their products and processes. To achieve this goal, DfE relies on outreach activities and information dissemination to industry participants and the public, as well as non-governmental organizations, EPA Regions, federal government laboratories, and state and local governments. Effective outreach and communications are vital to program success. The DfE program must ensure that its logo communicates clearly its safer chemistry and pollution prevention goals.

DfE's current logo has remained unchanged since the program began in 1992. The current DfE logo is dated and does not adequately convey and enable DfE's objective: To advance chemical-based products that are safer for people and the environment. A redesigned logo and messaging are needed to enhance communications and for the program to

reach its potential. It is important for the redesign effort to be informed by consumers, manufacturing partners, retailers, and other key audiences.

To help ensure broad public participation in the redesign process and that EPA receives input from a diverse demographic, the Agency will conduct a number of focus group sessions to obtain feedback on several logo design concepts and associated wording. DfE will also sponsor two surveys to gauge public awareness and understanding of the logo and its meaning before and after the redesign.

Abstract: The NSPS for Stationary Gas Turbines were proposed on October 3, 1977, and promulgated on September 10, 1979. Owners and operators of stationary gas turbines must submit a one-time-only notification report of construction/reconstruction, modification, and startup date, initial performance test date, physical or operational changes, and demonstration

of a continuous monitoring system. They also must provide a report on initial performance test result, monitoring results, and any excess emissions. Records must be maintained for the following topics: startups, shutdowns, and malfunctions; periods when the continuous monitoring system is inoperative; sulfur and nitrogen content of the fuel; fuel to water ratio; rate of fuel consumption; and ambient conditions. Semiannual reports are also required.

Form Numbers: None.

Respondents/affected entities:

Stationary gas turbines.

Respondent's obligation to respond:

Mandatory (40 CFR part 60, subpart GG).

Estimated number of respondents: 535 (total).

Frequency of response: Initially and semiannually.

Total estimated burden: 68,447 hours (per year). "Burden" is defined at 5 CFR 1320.3(b).

Total estimated cost: \$6,695,243 (per year), which includes zero annualized capital or operation & maintenance costs.

Changes in the Estimates: There is no change in the number of affected facilities or the number of burden hours as currently identified in the OMB Inventory of Approved Burdens. However, there is an increase in the estimated labor costs for industry and a decrease in the estimated labor costs for the Agency when compared to the previous ICR. This is not due to any program changes. They are the result of updated industry labor rates, which resulted in an increase in industry labor costs; and of a mathematical correction to the Agency cost estimate in the previous ICR.
