On March 18, 2014, Alaska Power Company filed an application for a preliminary permit, pursuant to section 4(f) of the Federal Power Act (FPA), proposing to study the feasibility of the West Creek Water Power Project (West Creek Project or project) to be located on West Creek and the West Branch Taiya River, near Skagway, Alaska. The sole purpose of a preliminary permit, if issued, is to grant the permit holder priority to file a license application during the permit term. A preliminary

permit does not authorize the permit holder to perform any land-disturbing activities or otherwise enter upon lands or waters owned by others without the owners' express permission.

The proposed project would consist of the following new facilities: (1) A 1,500-foot-long, 175-foot-high concrete gravity dam creating a 895-acre reservoir having a total storage capacity of 86,000 acre-feet at a normal maximum operating elevation of 780 feet mean sea level; (2) a water intake structure on the dam leading to a 15,900-foot-long, 10-foot-diameter, unlined tunnel; (3) a 60-foot by 150-foot powerhouse containing two turbine/generation units rated for a total of 25 megawatts; (4) a 100-foot-long by 80-foot-wide open channel tailrace returning water to the West Branch Taiya River; (5) a submarine 3.9-mile-long, 34.5-kilovolt transmission line extending from the powerhouse to a landing for a substation on Nahku Bay connected to an existing transmission line owned by the applicant (the point of interconnection); and (6) appurtenant facilities. The estimated annual generation of the West Creek Project would be 110 gigawatt-hours.
