

(7) Maintain a minimum altitude of 305 m from pinniped haul-outs and rookeries for aircraft and helicopter flight paths during missile launch operations, except in emergencies or for real-time security incidents (e.g., search-and-rescue, fire-fighting, adverse weather conditions), which may require approaching pinniped haul-outs and rookeries closer than 305 m.

(8) Review the launch procedure and monitoring methods, in cooperation with NMFS, if any incidents of injury or mortality of a pinniped discovered during post-launch surveys or indications of affects to the distribution, size, or productivity of the affected pinniped populations as a result of the authorized activities are thought to have occurred. If necessary, appropriate changes must be made through modification to this LOA prior to conducting the next launch of the same vehicle.

Through this LOA, the Navy is required to monitor for marine mammals. The Navy will submit annual technical reports to NMFS no later than December 31 of each year for the duration of the regulations. These reports will provide full documentation of methods, results, and interpretation pertaining to all monitoring tasks for launches during each calendar year. However, only preliminary information will be included for any launches during the 60-day period immediately preceding submission. The Navy will submit a draft comprehensive technical report to NMFS 180 days prior to the expiration of the regulations, providing full documentation of the methods, results, and interpretation of all monitoring tasks for launches to date. A revised final comprehensive technical report, including all monitoring results during the entire period of the regulations will be due 90 days after the regulations expire.

Dated: June 3, 2014.
