

Reduce Violent Crimes Against Women on Campus Program (Campus Program).

(3) *Agency form number, if any, and the applicable component of the Department of Justice sponsoring the collection:* Form Number: 1122-0005. U.S. Department of Justice, Office on Violence Against Women.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract:* The affected public includes the approximately 100 grantees (institutions of higher education) of the Campus Program whose eligibility is determined by statute. Campus Program grants may be used to enhance victim services and develop programs to prevent violent crimes against women on campuses. The Campus Program also enables institutions of higher education to develop and strengthen effective security and investigation strategies to combat violent crimes against women on campuses, including domestic violence, dating violence, sexual assault, and stalking.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond/reply:* It is estimated that it will take the approximately 100 respondents (Campus Program grantees) approximately one hour to complete a semi-annual progress report. The semi-annual progress report is divided into sections that pertain to the different types of activities in which grantees may engage. A Campus Program grantee will only be required to complete the sections of the form that pertain to its own specific activities.

(6) *An estimate of the total public burden (in hours) associated with the collection:* The total annual hour burden to complete the data collection forms is 200 hours, that is 100 grantees completing a form twice a year with an estimated completion time for the form being one hour.

SUPPLEMENTARY INFORMATION:

I. Introduction

Under section 101 of the Federal Mine Safety and Health Act of 1977, a mine operator may petition and the Secretary of Labor (Secretary) may modify the application of a mandatory safety standard to that mine if the Secretary determines that: (1) An alternative method exists that will guarantee no less protection for the miners affected than that provided by the standard; or (2) that the application of the standard will result in a diminution of safety to the affected miners.

MSHA bases the final decision on the petitioner's statements, any comments and information submitted by interested persons, and a field investigation of the conditions at the mine. In some instances, MSHA may approve a petition for modification on the condition that the mine operator complies with other requirements noted in the decision.

SUPPLEMENTARY INFORMATION:

I. Background

Section 101(c) of the Federal Mine Safety and Health Act of 1977 (Mine Act) allows the mine operator or representative of miners to file a petition to modify the application of any

mandatory safety standard to a coal or other mine if the Secretary of Labor determines that:

1. An alternative method of achieving the result of such standard exists which will at all times guarantee no less than the same measure of protection afforded the miners of such mine by such standard; or

2. That the application of such standard to such mine will result in a diminution of safety to the miners in such mine.

In addition, the regulations at 30 CFR 44.10 and 44.11 establish the requirements and procedures for filing petitions for modification.

II. Petitions for Modification

Docket Number: M–2014–018–C.

Petitioner: S & J Coal Mine, Inc., 15 Motter Drive, Pine Grove, Pennsylvania 17963.

Mine: Slope #2 Mine, MSHA I.D. No. 36–09963, located in Schuylkill County, Pennsylvania.

Regulation Affected: 30 CFR 75.1002(a) (Installation of electric equipment and conductors; permissibility).

Modification Request: The petitioner requests a modification of the existing standard to permit the use of nonpermissible electric drags and battery locomotives within 150 feet of pillar workings. The petitioner asserts that the request is due in part to the method of mining used in pitching anthracite mines and the alternative evaluation of the mine air quality for methane on an hourly basis during operation with one of the gas tests results to be recorded in the on-shift examination record. The petitioner states that:

(1) Equipment operation will be suspended any time methane concentration at the equipment reaches 0.5 percent either during operation or when found during a pre-shift examination.

(2) The equipment will be operated in the working section's only intake entry (gangway), which is regularly traveled and examined.

(3) The use of drags on less than moderate pitching veins (less than 20 degree pitch) is the only practical system of mining in use.

(4) Permissible drags are not commercially available, and due in part to their small size, permissible locomotives are not commercially available.

(5) As a result of low daily production rates and full timbering support, in-rushes of methane due to massive pillar falls are unlikely to occur.
