Summary

1. On June 20, 2014, OET issued a public notice seeking to supplement the record in the incentive auction proceeding by inviting comment on

measurements of wireless Long-Term Evolution (LTE) interference into digital television (DTV) receivers conducted by OET engineers.

2. In the inter-service interference (ISIX) public Notice, OET invited comment on a methodology for predicting ISIX. For purposes of that methodology, OET assumed that the wireless services operating in the new 600 MHz Band will appear noise-like to the DTV receiver and hence, that the interference potential from LTE will be nearly identical to DTV-to-DTV interference. In addition, OET incorporated an off-frequency rejection (OFR) factor as a function of varying degrees of spectral overlap due to filter roll-off in the misaligned future wireless blocks and existing TV channels in the 600 MHz Band. OET also added 0.8 dB to the interfering wireless signal to account for the possibility of co-channel power from multiple wireless blocks affecting one 6 MHz TV channel. Several commenters raised concerns about these assumptions which form the basis for the D/U ratios of Table 8, the OFR values of Table 9, and the assumed effective radiated power (ERP) in Table 10 of the ISIX Notice.

3. In April 2014, OET engineers tested the characteristics of LTE-into-DTV interference in the FCC Laboratory, and the results of those measurements are presented in the report. As explained in the report, four DTV receivers were tested in order to obtain a reasonable indication of their behavior in the presence of an interfering LTE eNodeB signal.

4. Additionally, the Consumer Electronics Association (CEA) submitted measurements of LTE to DTV interference on six newer model television receivers and two older model receivers.

Specific Topics of Comment

5. OET seeks comment on the measurements and observations discussed in OET's Report. Specifically, OET seeks comment on whether these measurements, in conjunction with CEA's measurements, support the D/U ratios, OFR, and power adjustments that appear in Tables 8, 9, and 10 of the *ISIX Notice*.

6. OET also seeks comment on the relevance of the measurements associated with two receiver models that are more than 7 years old. The OET Report contains measurements of a 2007 model year receiver and the CEA Report contains measurements of a 2006 model year receiver. OET anticipates that these receivers will no longer be commercially available and will be approaching the end of their useful

lifecycle at the time of the wireless build out in the 600 MHz Band.

7. The Notice was issued pursuant to § 0.31 of the Commission's rules by the Office of Engineering and Technology, a member of the Incentive Auction Task Force.

Federal Communications Commission.

Chief, Office of Engineering and Technology.

[that] receive greater levels of service and benefit from the Respondents' services at a lower cost;

and by [refusing] ". . . to negotiate any modification of its Access Fees charged to Off-Port Parking Users that were increased more than three-fold on May 19, 2014."
