

demonstrate that the varieties they use as a feedstock contain at least 75% adjusted cellulosic content and satisfy all other applicable definitional, registration, recordkeeping, and reporting requirements. We would consider any cultivars with an adjusted cellulosic content less than 75% to be forage sorghum, which we are not addressing in this Notice. See the discussion regarding energy cane in the July 2014 rule and accompanying memo to the docket³¹ for a description of the methodologies and data EPA considers suitable for demonstrating that the average adjusted cellulosic content is at least 75%. We expect that any approved petition for cellulosic biofuel made from biomass sorghum would contain registration requirements comparable to those set forth at 40 CFR 80.1450(b)(1)(xiv).

III. Summary

EPA invites public comment on its preliminary analysis of GHG emissions associated with the cultivation and transport of biomass sorghum as a feedstock for biofuel production. EPA expects to revise its analysis as appropriate in light of public comments received, and to thereafter use the analysis as part of its evaluation of the lifecycle GHG emissions of biofuel production pathways described in petitions received pursuant to 40 CFR 80.1416 which use biomass sorghum as a feedstock.

Dated: December 17, 2014.
