I. Background

Section 101(c) of the Federal Mine Safety and Health Act of 1977 (Mine Act) allows the mine operator or representative of miners to file a petition to modify the application of any mandatory safety standard to a coal or other mine if the Secretary of Labor determines that:

1. An alternative method of achieving the result of such standard exists which will at all times guarantee no less than the same measure of protection afforded the miners of such mine by such standard; or

2. That the application of such standard to such mine will result in a diminution of safety to the miners in such mine.

In addition, the regulations at 30 CFR 44.10 and 44.11 establish the requirements and procedures for filing petitions for modification.

II. Petitions for Modification

Docket Number: M–2016–011–C.

Petitioner: Rosebud Mining Company, 301 Market Street, Kittanning, Pennsylvania 16201.

Mine: Tom's Run Mine, MSHA I.D. No. 36–08525, located in Indiana County, Pennsylvania.

Regulation Affected: 30 CFR 75.503 (Permissible electric face equipment; maintenance) and 18.35(a)(5)(i) (Portable (trailing) cables and cords).

Modification Request: The petitioner requests a modification of the existing standard to permit the use of 480-volt trailing cables with a maximum length of 1100 feet when No. 2 American Wire Gauge (AWG) cable is used on DBT roof bolters. The petitioner states that:

(1) The trailing cables for the 480-volt DBT bolters will not be smaller than No. 2 AWG cable.

(2) All circuit breakers used to protect the No. 2 AWG trailing cable exceeding 700 feet in length will have instantaneous trip units calibrated to trip at 714 amperes \pm 5%. The trip setting of these circuit breakers will be sealed to ensure that the settings on these breakers cannot be changed, and these circuit breakers will have permanent, legible labels. Each label will identify the circuit breaker as being suitable for protecting the cables as listed above.

(3) Replacement circuit breakers and/or instantaneous trip units used to protect the No. 2 AWG trailing cable will be calibrated to trip at 714 amperes \pm 5%, and they will be sealed.

(4) All components that provide short-circuit protection will have a sufficient interruption rating in accordance with
