Consultation

A detailed assessment of the human remains was made by the Human Remains Repository, Department of Anthropology, University of Wyoming, professional staff in consultation with representatives of the Native Village of Larsen Bay.

History and Description of the Remains

Prior to 1991, human remains representing, at minimum, one individual were removed from the west side of the Miner's Point site (HR330), Kodiak Island, AK, probably by a Rock Springs, WY, physician. By 1991, the human remains had been given to Western Wyoming College in Rock

Springs, WY. In October 2016, the University of Wyoming evaluated the NAGPRA status of all human remains in their possession. Following analysis, in December of 2016, the Miner's Point individual (HR330) was formally accessioned into the Human Remains Repository, Department of Anthropology, University of Wyoming. The remains consist of a fragmentary human cranium of a Native American male, over the age of 50. No known individual was identified. No associated funerary objects are present.

The human remains are of an unknown age. The Alutiiq people assert that they have continuously lived on Kodiak Island and the surrounding areas for at least 7,000 years, which is the entire human history of the location. The human remains exhibit skeletal characteristics consistent with an assessment of Alaskan Native.

- Pursuant to 25 U.S.C. 3001(9), the human remains described in this notice represent the physical remains of one individual of Native American ancestry.
