SUPPLEMENTARY INFORMATION:

Title: FERC-725R, Mandatory Reliability Standards: BAL Reliability Standards.

OMB Control No.: 1902-0268.

Type of Request: Three-year approval of FERC-725R information collection requirement, as modified.

Abstract: On November 10, 2016, the North American Electric Reliability Corporation (NERC) filed a petition for Commission approval of retirement, pursuant to section 215(d)(1) of the Federal Power Act (FPA) and Section 39.5 of the Commission's regulations, of currently-effective Reliability Standard BAL-004-0 (Time Error Correction). NERC explains that since Reliability Standard BAL-004-0 became effective, improvements have been made to mandatory Reliability Standards (such as the development of Reliability Standards BAL-003-1.1 and BAL-001-2 and the Interconnection Reliability Operations and Coordination (IRO) Standards) that help ensure continued adherence to frequency approximating 60 Hertz over long-term averages and make Reliability Standard BAL-004-0 redundant.

Type of Respondents: Public utilities.

Estimate of Annual Burden¹: The Commission estimates the reduction (due to the retirement of Reliability Standard BAL-004-0) in the annual public reporting burden for the information collection as follows:

FERC 725R, reductions due to RD17-1-000	Number of respondents ²	Number of responses per respondent	Total number of responses	Average burden hours & cost per response ³	Annual burden hours & total annual cost
	(1)	(2)	(1)×(2)=(3)	(4)	(3)×(4)=(5)
Retirement of current standard BAL-004-0 (currently in FERC-725R).	110 (BA 99; RC 11)	– 1	– 110	3 hrs. (\$167) [(Eng.) 2 hrs. (\$129); (R.K.) 1 hr. (\$38)]	– 330 hrs.; – \$18,370 [Eng., – 220 hrs., – \$14,190; R.K. – 110 hrs., – \$4,180]
Total Reduction (Rounded).	– 110	– 330 hours; – \$18,370

The reduction to total annual burden and cost will be 330 hours and \$18,370.

¹ Burden is defined as the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. For further explanation of what is included in the information collection burden, refer to 5 Code of Federal Regulations 1320.3.

Comments: Comments are invited on: (1) Whether the collection of

² The estimated number of respondents is based on the NERC compliance registry as of December 12, 2016. According to the NERC compliance registry, there are 99 U.S. balancing authorities (BA) and 11 reliability coordinators (RC).

³ The estimates for cost per response are derived using the following formula: Burden Hours per Response \$/hour = Cost per Response. The \$64.29/

information is necessary for the proper performance of the functions of the

hour figure for an engineer (rounded to \$129 for two hours in the above table and the \$37.75/hour figure for a record clerk (rounded to \$38) are based on the average salary plus benefits from the Bureau of Labor Statistics. (https://www.bls.gov/oes/current/naics2_22.htm), May 2015, Section 22, Utilities. In the burden table, engineering is abbreviated as Eng., and record keeping is abbreviated as R.K.

Commission, including whether the information will have practical utility; (2) the accuracy of the agency's estimates of the burden and cost of the collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information collection; and (4) ways to minimize the burden of the collection of information on those who are to respond, including the use of automated collection techniques or other forms of information technology.
