Abstract: Gasoline volatility, as measured by Reid Vapor Pressure (RVP) in pounds per square inch (psi), is controlled in the spring and summer in order to minimize evaporative hydrocarbon emissions from motor vehicles. RVP is subject to a Federal standard of 7.8 psi or 9.0 psi, depending on location. The addition of ethanol to gasoline increases the RVP by about 1 psi. Gasoline that contains 9 volume percent to 10 volume percent ethanol is subject to a standard that is 1.0 psi greater. As an aid to industry compliance and EPA enforcement, the product transfer document, which is prepared by the producer or importer and which accompanies a shipment of gasoline containing ethanol, is required by regulation to contain a legible and conspicuous statement that the gasoline contains ethanol and the percentage concentration of ethanol. This is intended to deter the mixing within the distribution system, particularly in retail storage tanks, of gasoline which contains ethanol in the 9 to 10 percent range with gasoline which does not contain ethanol in that range. Such mixing would likely result in a gasoline which is in violation of its RVP standard. Also, a party wishing a testing exemption, for research on gasoline that is not in compliance with the applicable volatility standard, must submit certain information to EPA.

Form Numbers: None.

Respondents/affected entities: Entities potentially affected by this action are those who produce or import gasoline containing ethanol, or who wish to obtain a testing exemption.

Respondent's obligation to respond: Mandatory per 40 CFR 80.27(d) and (e).

Estimated number of respondents: 2,000.

Frequency of response: On occasion.

Total estimated burden: 12,330 hours per year. Burden is defined at 5 CFR 1320.03(b).

Total estimated cost: \$1.1 million, includes \$20 annualized capital or operation & maintenance costs.

Changes in estimates: There is no change in the hours in the total estimated respondent burden compared with the ICR currently approved by OMB. The use of ethanol in gasoline has increased slightly, but that has been offset by a slight decrease in gasoline consumption.
