Fish and Wildlife Service

50 CFR Part 17
[4500090022]

Endangered and Threatened Wildlife and Plants; 12-Month Findings on Petitions To List Four Species as Endangered or Threatened Species

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notification of 12-month petition findings.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), announce 12-month findings on petitions to list four species as endangered or threatened species under the Endangered Species Act of 1973, as amended (Act). After a thorough review of the best available scientific and commercial information, we find that listing the blackfin sucker, Mohave shoulderband snail, white-tailed prairie dog, and Woodville Karst

cave crayfish is not warranted at this time. However, we ask the public to submit to us at any time any new information that becomes available concerning the stressors to any of the species listed above or their habitats.

DATES: The findings in this document were made on December 6, 2017.

ADDRESSES: Detailed descriptions of the basis for each of these findings are available on the Internet at <http://www.regulations.gov> under the following docket numbers:

Species	Docket No.
Blackfin sucker	FWS-R4-ES-2017-0084
Mohave shoulderband snail.	FWS-R8-ES-2015-0021
White-tailed prairie dog ..	FWS-R6-ES-2008-0053
Woodville Karst cave crayfish.	FWS-R4-ES-2017-0085

Supporting information used to prepare these findings is available for public inspection, by appointment, during normal business hours, by contacting the appropriate person, as specified under **FOR FURTHER INFORMATION CONTACT**. Please submit any new information, materials, comments, or questions concerning these findings to the appropriate person, as specified under **FOR FURTHER INFORMATION CONTACT**.

FOR FURTHER INFORMATION CONTACT:

Species	Contact information
Blackfin sucker	Lee Andrews, Field Supervisor, Kentucky Ecological Services Field Office, 502-695-0468.
Mohave shoulderband snail	Mendel Stewart, Field Supervisor, Carlsbad Fish and Wildlife Office, 760-431-9440.
White-tailed prairie dog	Tyler Abbott, Field Supervisor, Wyoming Ecological Services Field Office, 307-772-2374, ext. 231.
Woodville Karst cave crayfish	Catherine Phillips, Field Supervisor, Panama City Ecological Services Field Office, 850-769-0552.

If you use a telecommunications device for the deaf (TDD), please call the Federal Relay Service at 800-877-8339.

SUPPLEMENTARY INFORMATION:

Background

Within 12 months after receiving any petition to revise the Federal Lists of Endangered and Threatened Wildlife and Plants, we are required to make a finding whether or not the petitioned action is warranted ("12-month finding"), unless we determined that the petition did not contain substantial scientific or commercial information indicating that the petitioned action may be warranted (section 4(b)(3)(B) of the Act (16 U.S.C. 1531 *et seq.*)). We must make a finding that the petitioned action is: (1) Not warranted; (2) warranted; or (3) warranted but precluded. "Warranted but precluded" means that (a) the petitioned action is warranted, but the immediate proposal

of a regulation implementing the petitioned action is precluded by other pending proposals to determine whether species are endangered or threatened species, and (b) expeditious progress is being made to add qualified species to the Federal Lists of Endangered and Threatened Wildlife and Plants (Lists) and to remove from the Lists species for which the protections of the Act are no longer necessary. Section 4(b)(3)(C) of the Act requires that we treat a petition for which the requested action is found to be warranted but precluded as though resubmitted on the date of such finding, that is, requiring that a subsequent finding be made within 12 months of that date. We must publish these 12-month findings in the **Federal Register**.

Summary of Information Pertaining to the Five Factors

Section 4 of the Act (16 U.S.C. 1533) and the implementing regulations at

part 424 of title 50 of the Code of Federal Regulations (50 CFR part 424) set forth procedures for adding species to, removing species from, or reclassifying species on the Federal Lists of Endangered and Threatened Wildlife and Plants. The Act defines "endangered species" as any species that is in danger of extinction throughout all or a significant portion of its range (16 U.S.C. 1532(6)), and "threatened species" as any species that is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range (16 U.S.C. 1532(20)). Under section 4(a)(1) of the Act, a species may be determined to be an endangered species or a threatened species because of any of the following five factors:

- (A) The present or threatened destruction, modification, or curtailment of its habitat or range;

(B) Overutilization for commercial, recreational, scientific, or educational purposes;

(C) Disease or predation;

(D) The inadequacy of existing regulatory mechanisms; or

(E) Other natural or manmade factors affecting its continued existence.

We summarize below the information on which we based our evaluation of the five factors provided in section 4(a)(1) of the Act to determine whether the blackfin sucker, Mohave shoulderband snail, white-tailed prairie dog, and Woodville Karst cave crayfish meet the definition of “endangered species” or “threatened species.” The supporting information upon which the finding for each species is based is documented in a species assessment form that contains more-detailed biological information, a thorough analysis of the listing factors, and an explanation of why we determined that these species do not meet the definition of an endangered species or threatened species. These forms can be found at <http://www.regulations.gov> under the appropriate docket number (see **ADDRESSES**, above).

In considering what stressors under the Act’s five factors might indicate that the species may meet the definition of a threatened species or an endangered species, we must look beyond the mere exposure of the species to the stressor to determine whether the species responds to the stressor in a way that causes actual impacts to the species. If there is exposure to a stressor, but no response, or only a positive response, that stressor does not cause a species to meet the definition of a threatened species or an endangered species. If there is exposure and the species responds negatively, the stressor may be significant. In that case, we determine whether that stressor drives or contributes to the risk of extinction of the species such that the species warrants listing as an endangered or threatened species as those terms are defined by the Act. This does not necessarily require empirical proof of impacts to a species. The combination of exposure and some corroborating evidence of how the species is likely affected could suffice. The mere identification of stressors that could affect a species negatively is not sufficient to compel a finding that listing is appropriate; similarly, the mere identification of stressors that do not affect a listed species negatively is insufficient to compel a finding that delisting is appropriate. For a species to be listed or remain listed, we require evidence that these stressors are operative threats to the species and its habitat, either singly or in combination,

to the point that the species meets the definition of an endangered or a threatened species under the Act.

In making these 12-month findings, we considered and thoroughly evaluated the best scientific and commercial information available regarding the past, present, and future stressors and threats. We reviewed the petitions, information available in our files, and other available published and unpublished information. These evaluations may include information from recognized experts; Federal, State, and tribal governments; academic institutions; foreign governments; private entities; and other members of the public.

The species assessment forms for the blackfin sucker, Mohave shoulderband snail, white-tailed prairie dog, and Woodville Karst cave crayfish provide the basis for these findings and can be found on the Internet at <http://www.regulations.gov> under the appropriate docket number (see **ADDRESSES**, above). The following are informational summaries for each of the findings in this document.

Blackfin Sucker (*Thoburnia atripinnis*)

Previous Federal Actions

On April 20, 2010, we received a petition from the Center for Biological Diversity (Center), Alabama Rivers Alliance, Clinch Coalition, Dogwood Alliance, Gulf Restoration Network, Tennessee Forests Council, and West Virginia Highlands Conservancy requesting that the blackfin sucker be listed as an endangered or threatened species under the Act. On September 27, 2011, we published a 90-day finding in the **Federal Register** (76 FR 59836) concluding that the petition presented substantial information indicating that listing the blackfin sucker may be warranted. This document constitutes the 12-month finding on the April 20, 2010, petition to list the blackfin sucker.

Summary of Finding

The blackfin sucker is a fish that is relatively small (140 mm (5.5 in.) in length) in comparison to other members of its family, Catostomidae, collectively known as suckers. The species is endemic to the upper Barren River System in north-central Tennessee and south-central Kentucky, primarily upstream of Barren River Dam, with historical records known from only two stream systems downstream of the dam.

Blackfin suckers inhabit clear headwater streams and are most frequently encountered in deeper sections of pools and runs. The species

is typically observed near bedrock ledges, slabrock boulders, rootwads, and undercut banks. During the March and April spawning period, males are associated with swift riffles and females occupy pools where they are found occasionally under flat rocks at the edges of riffles.

We evaluated all relevant stressors under the five factors, including any regulatory mechanisms and conservation measures addressing these stressors. The primary stressors include effects of agriculture, sedimentation, stream modification, impoundments, and climate change. Despite impacts from these stressors, we find that the species has maintained the whole of its historical range and the number of occupied streams has increased. Considering that impacts from these stressors are expected to decrease or remain stable, and that the species exhibits redundancy, representation, and resiliency, we find that these stressors do not, alone or in combination, rise to a level that causes this species to meet the definition of a threatened species or an endangered species. Therefore, we find that listing the blackfin sucker as threatened or endangered is not warranted. A detailed discussion of the basis for this finding can be found in the blackfin sucker species assessment form and other supporting documents (see **ADDRESSES**, above).

Mohave Shoulderband Snail (*Helminthoglypta (Coyote) greggi*)

Previous Federal Actions

On January 31, 2014, we received a petition from the Center requesting that the Mohave shoulderband snail be listed as an endangered or threatened species under the Act. We published a substantial 90-day finding in the **Federal Register** (80 FR 19259) on April 10, 2015. Subsequently, we entered into a stipulated settlement agreement with the Center that required us to submit a 12-month finding to the **Federal Register** by November 30, 2017. This document constitutes the 12-month finding on the January 31, 2014, petition to list the Mohave shoulderband snail.

Summary of Finding

The Mohave shoulderband snail is a small (0.48 to 0.58 in (12.3 to 14.6 mm) in length), brown desert snail. The species inhabits rock outcrops and talus slopes found on volcanic formations in the western region of the Mojave Desert at Middle Butte, Standard Hill, and Soledad Mountain.

The species is dependent on local precipitation and subsequent increases

in humidity within rock outcrop habitats. Although water represents the primary limiting resource in desert environments, other climatic and physical factors—such as temperature, topography, and food availability, or a combination of these factors—can influence the ecology of desert snails. Because of the hot, arid conditions in the Mojave Desert, the snail is active primarily during the brief winter season and enters a state of dormancy below ground during the remainder of the year. It emerges during and following periods of rainfall in search of food resources or for mating and egg-laying activities.

We evaluated all relevant stressors under the five factors, including any regulatory mechanisms and conservation measures addressing these stressors. The primary stressors include effects of habitat degradation from hard rock mining. We find that, while mining activities will likely result in some loss of suitable habitat, this loss will not lead to a significant decrease in the resources needed to meet the species' physical and ecological needs across the species' range. Furthermore, recent presence/absence surveys have resulted in additional observations of the species throughout its range. In all, we find that mining and other potential stressors, alone or in combination, do not rise to a level that causes this species to meet the definition of a threatened species or an endangered species. Therefore, we find that listing the Mohave shoulderband snail as threatened or endangered is not warranted. A detailed discussion of the basis for this finding can be found in the Mohave shoulderband snail species assessment form and other supporting documents (see **ADDRESSES**, above).

White-Tailed Prairie Dog (*Cynomys leucurus*)

Previous Federal Actions

On July 15, 2002, we received a petition to list the white-tailed prairie dog as threatened or endangered. We published a not-substantial 90-day finding in the **Federal Register** (69 FR 64889) on November 9, 2004. On February 22, 2008, after we received notice of a lawsuit challenging the not-substantial finding, we entered into a stipulated settlement agreement with the Center for Native Ecosystems and three other entities, to submit to the **Federal Register** a 12-month finding on the petition to list the white-tailed prairie dog. On June 1, 2010, we completed our status review and determined that the white-tailed prairie dog did not warrant listing (75 FR

30338). A September 9, 2014, court order remanded the 12-month not-warranted finding back to us for reconsideration (*Rocky Mountain Wild v. U.S. Fish and Wildlife Service* 2014, case 9:13-cv-00042-DWM). This finding constitutes our remanded 12-month finding on the petition to list the white-tailed prairie dog, and addresses all issues raised in the court's order.

Summary of Finding

The white-tailed prairie dog inhabits parts of Wyoming, Utah, Montana, and Colorado, and is one of five prairie dog species in western North America. The range of the white-tailed prairie dog has not changed appreciably since historical times, but historical poisoning campaigns, the introduction of plague, and habitat loss significantly reduced the abundance of white-tailed prairie dogs throughout its range.

The white-tailed prairie dog generally inhabits drier landscapes with shrub land vegetation, such as the high desert scrub community of Utah and sagebrush steppe of western Wyoming. It prefers areas with lower vegetation heights to facilitate predator surveillance, but it also may use dense brush adjacent to grassier areas to avoid predators. The white-tailed prairie dog digs its burrows, which require deep, well-drained soils.

We evaluated all relevant stressors under the five factors, including any regulatory mechanisms and conservation measures addressing these stressors. The primary stressors include effects of agricultural activities, shooting, poisoning, overgrazing, invasive weeds, wildfire, urbanization, energy development, drought, and plague. We found that white-tailed prairie dog populations are in moderate to high overall condition, with population trends stable or exhibiting some declines from stochastic events followed by recovery. In addition, white-tailed prairie dogs have multiple resilient populations, and exhibit adaptive capacity. Therefore, we find that these stressors do not, alone or in combination, rise to a level that causes this species to meet the definition of a threatened species or an endangered species. Therefore, we find that listing the white-tailed prairie dog as threatened or endangered is not warranted. A detailed discussion of the basis for this finding can be found in the white-tailed prairie dog species assessment form and other supporting documents (see **ADDRESSES**, above).

Woodville Karst Cave Crayfish (*Procambarus orcinus*)

Previous Federal Actions

On April 20, 2010, we received a petition from the Center requesting that the Woodville Karst cave crayfish be listed as an endangered or threatened species under the Act. On September 27, 2011, we published a 90-day finding in the **Federal Register** (76 FR 59836) concluding that the petition presented substantial information indicating that listing the Woodville Karst cave crayfish may be warranted. This document constitutes the 12-month finding on the April 20, 2010, petition to list the Woodville Karst cave crayfish.

Summary of Finding

The Woodville Karst cave crayfish is a subterranean species of crayfish endemic to several freshwater springs and sink caves within the panhandle of Florida. The adults are approximately 25 mm (1 in) in length and have a semitransparent cuticle revealing pinkish orange tissue underneath.

The species is known from 18 aquatic cave sites, all of which are within an area of approximately 100 square miles. It lives in shallow water at the mouth of sink holes to depths of 91 m (300 ft) and appears to require a flowing, freshwater, subterranean environment. However, specific water-quality requirements for the species are unknown.

We evaluated all relevant stressors under the five factors, including any regulatory mechanisms and conservation measures addressing these stressors. The primary stressors include effects of land-use activities and direct alterations of waterways, water withdrawal, sea-level rise, and overutilization. These stressors do not, alone or in combination, rise to a level that causes this species to meet the definition of a threatened species or an endangered species. Additionally, despite the potential for groundwater decline over time, populations are likely to remain resilient and be minimally affected since the species lives at significant spring depths and can move among springs and sinks in the underground system. Therefore, we find that listing the Woodville Karst cave crayfish as threatened or endangered is not warranted. A detailed discussion of the basis for this finding can be found in the Woodville Karst cave crayfish species assessment form and other supporting documents (see **ADDRESSES**, above).

New Information

We request that you submit any new information concerning the taxonomy,

biology, ecology, status of, or stressors to, the blackfin sucker, Mohave shoulderband snail, white-tailed prairie dog, and Woodville Karst cave crayfish to the appropriate person, as specified under **FOR FURTHER INFORMATION CONTACT**, whenever it becomes available. New information will help us monitor these species and encourage their conservation. We encourage local agencies and stakeholders to continue cooperative monitoring and conservation efforts for these species. If an emergency situation develops for any of these species, we will act to provide immediate protection.

References Cited

Lists of the references cited in the petition findings are available on the Internet at <http://www.regulations.gov> in the dockets listed above in **ADDRESSES** and upon request from the appropriate person, as specified under **FOR FURTHER INFORMATION CONTACT**.

Endangered and Threatened Wildlife; 90-Day Finding on a Petition To Identify the Northwest Atlantic Leatherback Turtle as a Distinct Population Segment and List It as Threatened Under the Endangered Species Act

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Department of Commerce.

ACTION: Notice of 90-day petition finding; request for information; and initiation of status review.

SUMMARY: We, NMFS, announce a 90-day finding on a petition to identify the Northwest Atlantic subpopulation of the leatherback turtle (*Dermochelys coriacea*) as a Distinct Population Segment (DPS) and list it as threatened under the Endangered Species Act (ESA). We find that the petition and information readily available in our files present substantial scientific and commercial information indicating that the petitioned action may be warranted. We are hereby initiating a status review of the leatherback turtle to determine whether the petitioned action is warranted and to examine the species globally with regard to application of the DPS Policy in light of significant new information since the original listing. To ensure that the status review is comprehensive, we are soliciting scientific and commercial information pertaining to the leatherback turtle from any interested party.

DATES: Information and comments on the subject action must be received by February 5, 2018.

ADDRESSES: Copies of the petition and related materials are available on NMFS' Web site at <https://www.fisheries.noaa.gov/species/leatherback-turtle>. You may submit comments, information, or data, by either of the following methods:

- *Federal eRulemaking Portal:* Go to [www.regulations.gov/#!docketDetail;D=NOAA-NMFS-2017-0147](http://www.regulations.gov/), click the "Comment Now" icon, complete the required fields, and enter or attach your comments.
- *Mail or hand-delivery:* Office of Protected Resources, NMFS, 1315 East-West Highway, Silver Spring, MD 20910. Attn: Jennifer Schultz.

Instructions: NMFS may not consider comments if they are sent by any other method, to any other address or individual, or received after the comment period ends. All comments received are a part of the public record and NMFS will post for public viewing on <http://www.regulations.gov> without change. All personal identifying information (e.g., name, address, etc.), confidential business information, or otherwise sensitive information submitted voluntarily by the sender will be publicly accessible. NMFS will accept anonymous comments (enter "N/A" in the required fields if you wish to remain anonymous).

FOR FURTHER INFORMATION CONTACT: Jennifer Schultz, Office of Protected Resources, NMFS (301) 427-8443, or email jennifer.schultz@noaa.gov. Persons who use a Telecommunications Device for the Deaf (TDD) may call the Federal Information Relay Service

(FIRS) at 1-800-877-8339, 24 hours a day and 7 days a week.

SUPPLEMENTARY INFORMATION:

Background

On September 20, 2017, NMFS received a petition from Blue Water Fishermen's Association to identify the Northwest Atlantic leatherback turtle as a DPS and list it as threatened under the ESA. The species is currently listed as endangered throughout its range under the ESA (35 FR 8491, June 2, 1970). Copies of the petitions are available upon request (see **ADDRESSES**).

ESA Statutory, Regulatory, and Policy Provisions and Evaluation Framework

Section 4(b)(3)(A) of the ESA of 1973, as amended (16 U.S.C. 1531 *et seq.*), requires, to the maximum extent practicable, that within 90 days of receipt of a petition to list a species as threatened or endangered, the Secretary of Commerce make a finding on whether that petition presents substantial scientific or commercial information indicating that the petitioned action may be warranted, and to promptly publish such finding in the **Federal Register** (16 U.S.C. 1533(b)(3)(A)). When it is found that substantial scientific or commercial information in a petition indicates the petitioned action may be warranted (a "positive 90-day finding"), we are required to promptly commence a review of the status of the species concerned during which we will conduct a comprehensive review of the best available scientific and commercial information. In such cases, we conclude the review with a finding as to whether, in fact, the petitioned action is warranted within 12 months of receipt of the petition. Because the finding at the 12-month stage is based on a more thorough review of the available information, as compared to the narrow scope of review at the 90-day stage, a "may be warranted" finding does not prejudice the outcome of the status review.

Under the ESA, a listing determination may address a species, which is defined to also include subspecies and, for any vertebrate species, any DPS that interbreeds when mature (16 U.S.C. 1532(16)). A joint NMFS-U.S. Fish and Wildlife Service (USFWS) policy clarifies the agencies' interpretation of the phrase "distinct population segment" for the purposes of listing, delisting, and reclassifying a species under the ESA (*i.e.*, "DPS Policy;" 61 FR 4722, February 7, 1996). A species, subspecies, or DPS is "endangered" if it is in danger of extinction throughout all or a significant portion of its range, and "threatened" if
