

license renewals in 2018, 2019, and 2020. Subsequent License Renewal is a term referring to all license renewals allowing a plant to operate beyond the 60-year period (40-year period of an initial operating license and a 20-year period of the first license renewal). Based on a survey conducted by the nuclear power industry, the NRC staff believes that additional applications for subsequent license renewal will be submitted in future years.

The NRC has developed and published final guidance for licensees that intend to apply for subsequent license renewal. The guidance documents for subsequent license renewal (*i.e.*, for operation from 60 to 80 years), NUREG–2191, the “Generic Aging Lessons Learned for Subsequent License Renewal (GALL–SLR) Report,” and NUREG–2192, the “Standard Review Plan for Review of Subsequent License Renewal Applications for Nuclear Power Plants” (SRP–SLR), address the issues for increased operating time from 60 to 80 years. The guidance also considers recent operating experience identified since the release of GALL Report, Rev. 2. The GALL–SLR Report and SRP–SLR also include changes that have been previously issued for public comment as part of the staff’s license renewal Interim Staff Guidance (ISG) process. These ISGs can be found at <http://www.nrc.gov/reading-rm/doc-collections/isg/license-renewal.html>. These ISGs (ML12286A275, ML11297A085, ML12138A296, ML12270A436, ML12044A215, ML12352A057, ML13227A361, ML15308A018, and ML16237A383) have been incorporated into the GALL–SLR Report and the associated sections of the SRP–SLR. The NRC has previously received public comments on these ISGs, and is not requesting additional comments on the ISGs.

A notice of availability and request for comments on draft NUREG–2191 and draft NUREG–2192 was published in the **Federal Register** on December 23, 2015 (80 FR 79956). The public comment period ended on February 29, 2016. The NRC received over 500 comments on these draft guidance documents. The NRC also published a supplement to the draft guidance documents in the **Federal Register** on March 29, 2016 (81 FR 17500). The public comment period on the supplements to draft NUREG–2191 and draft NUREG–2192 ended May 31, 2016. The NRC reviewed and dispositioned all of the comments and published the disposition of the comments and the technical bases for their disposition in companion NUREG documents, which are being published

at this time, NUREG–2221, “Technical Bases for Changes in the Subsequent License Renewal Guidance Documents NUREG–2191 and NUREG–2192,” and NUREG–2222, “Disposition of Public Comments on the Draft Subsequent License Renewal Guidance Documents NUREG–2191 and NUREG–2192.” The NRC’s resolution of these comments are incorporated in the final SLR guidance documents, NUREG–2191 and NUREG–2192.

II. Background

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the NRC is requesting public comment on its intention to request the OMB's approval for the information collection summarized below:

1. *The title of the information collection:* 10 CFR part 54, "Requirements for Renewal of Operating Licenses for Nuclear Power Plants."
2. *OMB approval number:* 3150-0155.
3. *Type of submission:* Extension.
4. *The form number, if applicable:* Not applicable.
5. *How often the collection is required or requested:* There is a one-time application for any licensee wishing to renew the operating license for its nuclear power plant. There is a one-time requirement for each licensee with a renewed operating license to submit a letter documenting the completion of inspection and testing activities. All holders of renewed licenses must perform yearly record keeping.
6. *Who will be required or asked to respond:* Commercial nuclear power plant licensees who wish to renew their operating licenses and holders of renewed licenses.
7. *The estimated number of annual responses:* 66 (8 reporting responses + 58 recordkeepers).
8. *The estimated number of annual respondents:* 6.

9. *The estimated number of hours needed annually to comply with the information collection requirement or request:* 226,320 (168,320 hours

reporting + 58,000 hours recordkeeping).

10. *Abstract:* Part 54 of 10 CFR establishes license renewal requirements for commercial nuclear power plants and describes the information that licensees must submit to the NRC when applying for a license renewal. The application must contain information on how the licensee will manage the detrimental effects of age-related degradation on certain plant systems, structures, and components so as to continue the plant's safe operation during the renewal term. The NRC needs this information to determine whether the licensee's actions will be effective in assuring the plants' continued safe operation during the period of extended operation. Holders of renewed licenses must retain in an auditable and retrievable form, for the term of the renewed operating license, all information and documentation required to document compliance with 10 CFR part 54. The NRC needs access to this information for continuing effective regulatory oversight.

III. Specific Requests for Comments

The NRC is seeking comments that address the following questions:

1. Is the proposed collection of information necessary for the NRC to properly perform its functions? Does the information have practical utility?
2. Is the estimate of the burden of the information collection accurate?
3. Is there a way to enhance the quality, utility, and clarity of the information to be collected?
4. How can the burden of the information collection on respondents be minimized, including the use of automated collection techniques or other forms of information technology?

Dated at Rockville, Maryland, this 10th day of April 2018.
