

uses, the primary emphases are for conservation and reduction of habitat fragmentation and resource degradation.

Alternative C focuses on accommodating increased population growth and use of public lands within the planning area by emphasizing land disposal for local community expansion, providing economic expansion through extractive and renewable energy resource use and

continues to provide recreational opportunities.

Alternative D is the Preferred Alternative, and emphasizes managing public lands to promote economic development while maintaining natural resource values. This alternative recognizes the diverse issues and needs throughout the planning area by promoting a balanced use of resources including management for oil and gas leasing and development, livestock

grazing, recreational use and wildlife habitat, including big game winter range and migration corridors.

In the Draft EIS, the BLM proposes and evaluates ACECs to protect specific resource values and other uses where appropriate. Pursuant to 43 CFR 1610.7–2(b), this notice announces a concurrent public comment period for potential ACECs. A more detailed summary of all proposed ACECs is available at the project website provided above.

Pertinent information regarding the ACECs proposed for designation in Alternative D:

- *Hixon Columbian Sharp-tailed Grouse (CSTG) Habitat ACEC*: The 1988 Cascade RMP designated 4,170 acres as the Hixon CSTG Habitat ACEC to intensify habitat management for one of the last remaining populations of CSTG in western Idaho. Alternative D expands the ACEC to include lands acquired through purchase or exchange since the last planning effort and maintains habitat management objectives. The alternative would allow development activities within the ACEC, subject to restrictions, in order to maintain CSTG habitat. Salable mineral development would be allowed on sites more than 0.5 miles from key nesting and brood-rearing habitat as long as it does not exceed two acres in size, and would be subject to seasonal restrictions; the ACEC would be open to fluid mineral leasing subject to moderate constraints; all rights-of-way would be subject to timing restrictions and aboveground facilities would only be authorized if co-located with existing facilities; renewable energy development would not be allowed; and livestock grazing would be managed to maintain or enhance CSTG habitat.

- *Long-billed Curlew Habitat ACEC*: The 1988 Cascade RMP designated this ACEC to protect crucial nesting habitat for the curlew. Alternative D retains the ACEC designation for areas that continue to provide suitable habitat. The ACEC includes the following management prescriptions: Salable mineral development is allowed on sites more than 0.5 miles from key nesting and brood-rearing habitat, as long as it does not exceed five acres in size and conforms to seasonal restrictions; fluid mineral leasing is open subject to moderate constraints; and excludes wind energy rights-of-way.

The BLM initiated the land-use planning process on April 3, 2008, through a Notice of Intent published in the **Federal Register** (73 FR 18298), notifying the public of a formal scoping period and soliciting public participation. Since 2008, the BLM has held multiple meetings with Tribal governments, stakeholders, interest groups, cooperating agencies, counties and the public.

After the public comment period, the BLM will use substantive public comments to revise the Draft RMP/Draft EIS in preparation for its release as the Proposed RMP/Final EIS. The Notice of Availability for the Proposed RMP/Final

EIS will be published in the **Federal Register**.
