SUPPLEMENTARY INFORMATION: Section 9 of the ESA and Federal regulations prohibit the ‘taking’ of a species listed as endangered or threatened. The ESA defines “take” to mean harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct. NMFS may issue permits, under limited circumstances to take listed species incidental to, and not the purpose of, otherwise lawful activities. Section 10(a)(1)(B) of the ESA provides for authorizing incidental take of listed species. NMFS regulations governing permits for threatened and endangered

species are promulgated at 50 CFR 222.307.

Background

NMFS received a draft permit application from Eddystone Generating Station (“Eddystone”) on June 28, 2018. Based on our review of the draft application, we requested further information and clarification. On December 21, 2018, Eddystone submitted an application. Based on review of the application, NMFS and Eddystone held further discussions regarding what needed to be incorporated in the Habitat Conservation Plan (HCP). On June 21, 2019, Eddystone submitted a revised and complete application for the take of ESA-listed shortnose sturgeon and Atlantic sturgeon (New York Bight Distinct Population Segments) due to the operation of the cooling water intake structure (CWIS) and vessel activity associated with fuel delivery to the station.

Eddystone is requesting a total annual incidental take of shortnose and Atlantic sturgeon as follows:

Entrainment—An annual take limit of 3 Atlantic sturgeon larvae in entrainment sampling, commensurate with an annual take estimate of 3 age-1 equivalents;

Impingement—An annual take limit of three young-of-the-year (YOY) or older Atlantic sturgeon collected in impingement sampling, commensurate with an annual take estimate of seven YOY or older Atlantic sturgeon. And an annual take limit of three YOY or older shortnose sturgeon collected in impingement sampling, commensurate with an annual take estimate of seven YOY or older shortnose sturgeon; and

Interactions with Vessel Activity due to Oil Deliveries—A ten-year take limit for vessel activity of one Atlantic sturgeon. The first three-years of monitoring data collected under the permit will be analyzed to verify the requested total annual incidental take. As data are gathered and analyzed through monitoring, NMFS will amend the permit to reflect any changes in the take estimate, if appropriate.

Conservation Plan

Section 10 of the ESA specifies that no permit may be issued unless an applicant submits an adequate conservation plan. The conservation plan prepared by Eddystone describes measures designed to minimize and mitigate the impacts of any incidental take of ESA-listed shortnose and Atlantic sturgeon. To avoid and minimize take of sturgeon, Exelon will only operate Eddystone’s circulating
