#### History and Description of the Remains

On August 10, 1969, human remains representing, at minimum, two individuals were removed by Dr. George C. Frison from 48PA551, the Dead Indian site, which is located near the Dead Indian Campground in the Shoshone National Forest, Park County, WY. At the time, Frison was the Wyoming State Archeologist and Head of the Department of Anthropology at the University of Wyoming. The fragmentary human remains are those of a child eight–nine years old and an adult (represented by a chipped and worn tooth). The burial was reported as probably a secondary interment with no associated funerary objects. No known individuals were identified.

The Dead Indian site was first visited by avocational archeologists in 1967. Subsequently the Wyoming Archaeological Society (WAS) conducted excavations there in 1969, 1971, and 1972. The major excavation of the site, in 1972, was supervised by George C. Frison of the University of Wyoming. Based on three radiocarbon tests and obsidian hydration tests, the site is McKean complex, Middle Archaic (3800+/-110 to 4430+/-250 B.P.).
