Consultation

History and Description of the Remains

In 1956, human remains representing, at minimum, two individuals were removed from Payne Cave (CA-TEH-193) in Tehama County, CA. The excavations were authorized by the Lassen National Forest, and were carried out by the University of California Archaeological Survey. Since 2005, the Lassen National Forest has been working with California State University Chico to complete analysis of the faunal and archeological collection from CA-TEH-193 and determine if any additional human remains are present in the collection. This examination, completed in 2018, identified 12 bones representing a minimum of two individuals. No known individuals were identified. No associated funerary objects are present. Based on ethnographic and historical accounts, as well as the geographical location of the cave, these human remains are affiliated with the Yana. The descendants of the Yana people are the Pitt River Tribe, California and the Redding Rancheria, California.

At an unknown date, human remains representing, at minimum, two individuals were removed from Paynes Cave Shelter (CA-THE-193) in Tehama County, CA. In 2018, the University of Idaho identified eight bones representing two individuals among the collection the Phoebe Hearst returned to the Lassen National Forest. No known individuals were identified. No associated funerary objects are present.
